

IMPORTANT!

HOW TO CHECK YOUR SATELLITES AND RSSI'S AND GPS FIX

It is very important that
SATELLITES & RSSI'S & GPS FIX
are checked

- After the magnet is taken off, the device will stay awake for 30-45 minutes.
(be sure to keep the magnet in case you need to reset the device in the future)
- Log on to your account and click the BINOCULAR icon to locate the device.
- Click on the HISTORY FOLDER icon, which is next to your binoculars. When it pops up just click SUBMIT.
- At the bottom of the map you will see DISPLAY FIELDS. Click on the down arrow and select SATELLITES, RSSI's, and GPS FIX.
- Click on the green button that says "Run Report".
- You will then see the address at which the unit located and next to that will be your Satellites and RSSIs.

GOOD SATELLITES – 6 and up is good

GOOD RSSI's- Between 80-100

GPS FIX: If LK is notated before the address given then the signal is being BLOCKED and device will have to be moved to a different location
