

## INSTALLATION GUIDE

### Wire Free Installation -

**Tools included** – On-Off Gasket / Zip Ties / Velcro

**Device Location** - Anywhere in the vehicle where you can securely mount the device. We recommend that you do not install the top side of the device directly under metal. The bottom of the device is the side that houses the removable on-off gasket and should face down.

### Best device location options:

- under vehicle dash
- under vehicle seats
- glove box area
- under center console
- trunk quarter panels (under carpet)

### Activation process

1. Hold down the “On” button on the bottom of the device for seven seconds.  
The red LED on the side of the device should move to a solid “On” status (not flashing).  
Then Release the “On” button.
2. The red LED will turn “Off” automatically once the device has sent in its first message.  
This process can take up to fifteen minutes
3. Remove the on/off gasket.  
The gasket is no longer required once you have received a message from the device.
4. Check the  application (desktop or mobile) to ensure that the device has sent in a message.
5. Once you have received a message, the device has been successfully activated.

### Troubleshooting ( If no message has been received )

1. Drive the vehicle briefly down the street and recheck application to see if a message has been received.
2. Or, use the gasket to turn the device off by holding down the “Off” button for seven seconds. And then turn the device back “On.”
